

LIGHTING PRODUCTS RECYCLING PROGRAM

Recycling of used lamps (bulbs) and ballasts is a growing concern for property owners, managers, and electrical contractors for the following reasons:

- Under the Universal Waste Rule, used fluorescent and High Intensity Discharge (HID) lamps contain substances which are detrimental to the environment and require a qualified disposal program to help eliminate those risks.
- In our litigious society, as well as the current focus on “green” initiatives, it is incumbent upon property owners, managers, and electrical contractors to not only protect themselves from liability and possible governmental fines, but to also *promote* themselves as good stewards of the environment.

BENEFITS:

1. Catoctin Lighting’s simple, cost-effective plan will eliminate the need for the purchase and maintenance of bulb crushers at your facility.
2. No man hours will be required for crushing or other handling of used lighting products, which will save you and your company time and money.
3. The only space required at each facility would be the storage of 2-3 boxes.
4. Removal of used lighting products will be facilitated by our trained associate, thereby minimizing liability to you and your company.
5. Proper disposal documentation will be maintained by Catoctin Lighting and will be available for inspection upon request.

A price schedule is attached for your review.

If you would like additional information regarding this worthwhile program, or if you would be interested in instituting lamp and ballast recycling at your facility, please give us a call and we will be happy to help you and your facility become a company who recycles and protects the environment!
